

Due date: 25-Aug-2023

Learning summary report by each student

- Create a word document file with a summary on what you have learnt so far in this lab session ?
- take the concepts we have learnt like: Pandas dataframe with operations and functions
- Various matplotlib plotting techniques and functions to visualize the data
- Put screenshot of the codes you have implemented and the output observed
- explain the output with your understanding of why that is done

While giving write up make sure you cover on each of the plotting functions we have covered:

- Line, scatter plot, Bar, Stacked bar, Box plot, hist plot etc.

You can use different datasets from sklearn like diabetes, titanic or any other. But make sure you explain what that data is in the introduction.

I want each one of you to do it independently, and I hope not to see any Plagiarism in doing this exercise
